

GROUP FITNESS AUDIO

FEEL THE MUSIC. HEAR EVERY WORD.

FEATURED INSTALLATION • RTR PILATES

High-energy program audio with crystal-clear instruction. EPIC separates instructor voice and program audio into dedicated loudspeaker systems so the music delivers the punch while the instructor stays intelligible everywhere in the room.

INSTRUCTOR VOICE OVERHEAD

Dedicated pendant loudspeakers distribute the microphone evenly across the participant area, creating the sensation that the instructor is right over the participant's shoulder.

PROGRAM AUDIO UP FRONT

Dedicated front loudspeakers and subwoofer reinforcement deliver energy and impact without forcing the instructor's voice to compete with the soundtrack.

SEPARATE PATHS. ONE EXPERIENCE.

Independent routing, processing and level control let voice and music coexist instead of compete - a philosophy refined over 15+ years across Pilates, cycle, HIIT, Zumba and other group fitness.

SOPHISTICATED BEHIND THE SCENES. SIMPLE ON THE SURFACE.

POWERFUL SYSTEM. EFFORTLESS TO OPERATE.

Any instructor - regardless of technical ability - can walk in, glance once and run class.

NO KNOBS. NO BUTTONS.

The iPad is the primary instructor interface and can be mounted at the equipment rack, on the wall, or on a pedestal stand for cycle and other instructor-led formats.

- Microphone level
- Music level
- Subwoofer boost / override
- Source selection
- Amplifier / system status

One device, control + content: the same iPad can switch between the control interface and Spotify, YouTube Music or another preferred streaming service.

SOURCE AGNOSTIC. Use the music platform you prefer - while maintaining a professional offline fallback when Wi-Fi or streaming fails.

ALWAYS HAVE A BACKUP.

Every group-fitness package includes a TASCAM CD-400U professional media player as a dependable secondary source.

CD / CD-R / CD-RW • SD / SDHC up to 32 GB • USB flash up to 64 GB • Bluetooth 5.1 • front AUX • AM/FM • balanced XLR + RCA outputs • power-on-play

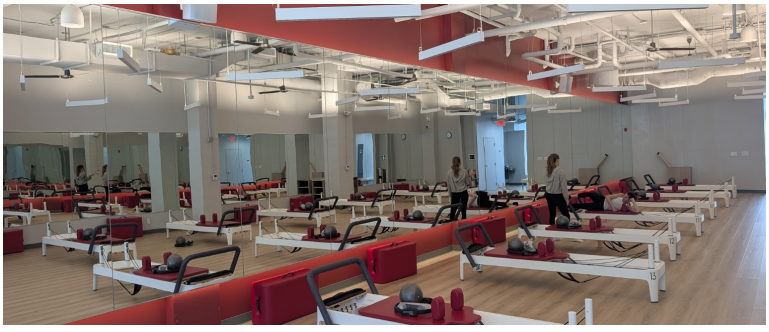

NO WI-FI? NO LOST CLASS.

ENGINEERED BEFORE. CALIBRATED AFTER.

Before installation, the room is engineered for the correct number and placement of voice pendants, program loudspeakers and subwoofer reinforcement needed for consistent coverage.

After installation, the system is measured and calibrated with REW to optimize levels, EQ, crossover, delay, polarity and overall room response.

We do not just install valuable audio gear - we calibrate the room so you hear the investment.

RTR Pilates shown as a real-world example of the broader EPIC group-fitness audio philosophy.
